NSE and Airlift announce a new step in their collaboration

NSE and Airlift are delighted to announce a new step in their collaboration on NVIS projects. For many years, NSE and Airlift have worked closely together on many NVIS projects. Airlift has supported NSE on civilian projects where Part 21J was mandatory, while NSE has supported Airlift by supplying components from its portfolio as well as NVIS expertise.

NSE Expands NVIS Capabilities

In 2023, NSE decided to increase its NVIS expertise by moving from APDOA to DOA, targeting final approval by 2025.

In parallel, Airlift decided to stop its DOA activity in order to refocus on its core business of Helicopter Operations and Services.

Today, both companies are pleased to inform all their customers that Airlift NVIS STCs have been successfully transferred to NSE.

We strongly thank EASA for their support and responsiveness in the transfer process.

About NSE

Founded in 1983, NSE is an international group of 700 employees, specializing in Defense, Aeronautics, Electronics, and Industry. Renowned for its expertise in operational support and electronic engineering, NSE serves both civil and military clients. NSE provides end-to-end services across the entire lifecycle of embedded aeronautical equipment—including design, industrialization, production, certification, and MRO (Part 145). The group also offers advanced capabilities in NVIS certification and mods, wiring harnesses, systems integration, flight data recording and geolocation, as well as aircraft retrofit projects.

About Airlift

Airlift AS, founded in 1986 and based in Førde, Norway, is Northern Europe's leading domestic helicopter service provider with a fleet of 24 helicopters and 115 employees. The company specializes in passenger and cargo transport, search and rescue, and operates the region's only heavy-lift helicopter over 4 tons. Airlift also offers advanced technical aviation services (Part-21 & Part-145).
